

News Release

Intel and Innovate+Educate announce Intelligent Innovation Awards

What: Intel and Innovate+Educate are pleased to announce the launch of “Intelligent Innovation” classroom grants to advance STEM education in rural New Mexico.

As a global technology leader, Intel is a strong and active supporter of STEM (science, technology, engineering and math) education - especially in the states where they operate. Intel started partnering with Innovate+Educate in 2009 to advance effective education transformation with the goals of supporting teacher performance, increasing student competitiveness, building job skills, supporting economic development and scaling the most successful programs across New Mexico.

Intel and Innovate+Educate are dedicated to finding the most innovative STEM programs across the state, empowering these programs with these grants and then encouraging educators to share their successes so the best STEM programs can scale. Intel allocated \$40,000 to award the best applicants for STEM programs in New Mexico school districts with 13,000 or fewer students. The grant committee will consider requests up to \$5,000.

When: Applications are due by close of business on February 29, 2012. Announcements in April 2012.

Where: www.innovateeducate.org/intelligentinnovation2012

Why: To improve STEM education and outcomes for students in rural New Mexico.
